[Abdelmonem Mohamed Abdelmonem]

Scenarios where using Nosql databases makes more sense.

1- When you need to store unstructured data with no predefined schema.
2- When you need to store deeply nested data.
3- NoSQL is a better choice for agile development.
4- NoSQL is a better choice for big data applications.

Important notes:

- Postgres can store JSON data.
- We can use SQL and NoSQL databases in the same application.
